

Survey Level Analysis File for Respondents in Medicare Health Outcome Survey 1998-2021 (MHOS Cohorts 1-22) October, 2023						
File contains one record per respondent per cohort per time point (baseline or follow up) for each completed or partially completed survey.						
Included are survey related derived variables, variables from SEER, and MHOS surveys.						
For Cohort 22, only respondents previously linked (SEER cases, or non-cancers linked by prior surveys or by other study file sources) have been included in this release.						
SEER-Medicare Cancer File for SEER Patients linked with Medicare (Cancer Diagnosis 1973-2019)						
MBSF: Master Beneficiary Summary File, 1999-2020						
CMS: Center for Medicare and Medicaid Services						
HOS 1.0/HOS 2.0/HOS 2.5/HOS 3.0: Medicare Health Outcomes Surveys (HOS) version 1.0, 2.0, 2.5, and 3.0.						
Cohorts 1-6 used HOS 1.0 at both Baseline and Follow Up, Cohorts 7 & 8 used HOS1.0 at Baseline and HOS 2.0 at Follow Up, Cohorts 9-13 used HOS 2.0 at both Baseline and Follow Up, Cohorts 14 & 15 used HOS 2.0 at Baseline and HOS 2.5 at Follow Up, Cohorts 16 & 17 used HOS 2.5 at Baseline and HOS 3.0 at Follow Up, Cohorts 18-22 used HOS 3.0 at both Baseline and Follow Up.

It would not be easy to equate the definitions across the cohorts since they were unique to the point in time in which they were obtained. For instance, the designation of a plan as a SHMO (Social HMO) has been dropped at some point in time. Another issue is that some plan types were not required to report HOS some years, but were required or could volunteer to report in other years.

Beginning in 2006 for the MHOS, the SF-36 instrument was replaced by the VR-12 instrument. This resulted in changes (variable name and definition) to the database.							
The following variables (465-482) are MHOS derived scale scores using algorithms developed by Boston University (March, 2016) to re-score the 8 scale (PF, RP, BP, GH, MH, RE, SF, VT) scores to make the VR-12 scores comparable to the SF-36 scores. You can request a copy of the Boston University Bridge program by submitting a query to SEER-MHOS@hsag.com, and for more information, see: http://healthcaredelivery.cancer.gov/seer-mhos/program/recode.html .							
Note from BU: The PCS/MCS scores are meant to be mean 50 SD 10 in a general population, so they are not restricted to 0/100.							
For the items/scales, the negative numbers are needed to properly balance the results for groups, especially for the role items.							
Group averages should lie in (0,100). If they don't they could be limited, but individual scores should not be limited.							
Incorporated Boston University November 2018 Algorithm to adjust the 8 scales by survey mode and language.

	SF-36 PCS/MCS scores for Cohorts 1-6 baseline/follow up, and Cohorts 7-8 baseline were rescored, using a 36-item MRE equivalent algorithm from Boston University, so that scores are comparable to the VR-12 scores for cohorts 7-8 follow up, Cohorts 9-22 baseline and follow up. For analyses that use the bridging algorithm to pool data from both eras, it is important to use the PCS12 and MCS12 summary measures which use imputation methods to account for missing data on items and therefore cannot be transformed to a T-score metric. The PCS12 and MCS12 measures have similar properties to the PCS_T and MCS_T summary metrics. Incorporated Boston University November 2018 Algorithm to adjust the PCS12 and MCS12 scores by survey mode and language.

	Added Urban/Rural Continuum Code from SEER*Stat, August 1, 2018						
320	RUCCode	Char 2	Rural-Urban Continuum Code from SEER*Stat based on State/county of residence at time of survey.	\$RUCCODE	01	Counties of metro areas of 1 million population or more. Central and Fringe Counties on 1998 surveys were combined; also see Note below.	Survey year 1998: use 1993 Rural-Urban Continuum Code; Survey years 1999-2008: use 2003 Rural-Urban Continuum Code; Survey Year 2009-2018: use 2013 Rural-Urban Continuum Code.
					02	Counties in metro areas of 250,000 - 1,000,000 population	
					03	Counties in metro areas of fewer than 250,000 population	
					04	Urban population of 20,000 or more, adjacent to a metro area	
					05	Urban population of 20,000 or more, not adjacent to a metro area	
					06	Urban population of 2,500-19,999, adjacent to a metro area	
					07	Urban population of 2,500-19,999, not adjacent to a metro area	
					08	Completely rural or less than 2,500 urban population, adjacent to a metro area	
					09	Completely rural or less than 2,500 urban population, not adjacent to a metro area	
					88	Missing/Unknown Alaska/Hawaii	
					99	Missing Value	
					blank	Not available. Majority of respondents from Puerto Rico	
	NOTE:						
	In earlier versions of the Rural-Urban Continuum Codes, metro areas with 1 million population or more were subdivided between central counties (Code 0) and fringe counties (Code 1).						
	The Code 1 group has become much less meaningful in the last two censuses as more and more counties of large metro areas have been rated as central counties by OMB procedures.						
	In 2000, only 1.6 percent of the population of large metro areas was in fringe counties. Therefore, this distinction has been dropped.						
	Codes 0 and 1 have been combined, and the new code 1 represents all counties in metro areas of 1 million or more population.
